

A New Innovation in Tamper-Evident Packaging

Weedon

Packaging Solutions Centre

The Problem

With more and more goods being bought online and delivered to the customer's door, security is becoming increasingly important in countering both theft and contamination.

Internet retailers need cost-effective packaging that cannot be secretly opened in transit, its contents removed or damaged and then the package resealed – with no-one any the wiser until the customer takes delivery!

The Solution

Weedon's new locking mechanism for tamper-evident packaging which cannot be opened without tearing the box. The front seal folds and clips into the case using an innovative one-way push-lock.

The Benefits

- The package cannot be opened without damaging the box, making any interference obvious.
- The packaging does not require any special labels or tapes – which also minimises production costs.
- This packaging is ideal for fragile and high value goods such as electronics, gifts, plants and flowers.

Weedon PSC – the right partner for the job

- Our innovative structural design team can solve even the most complex packaging problem.
- Our Internet packaging range also includes Securepak, which uses adhesive tape applied inline on our corrugator as part of the production process – ideal for sending books, CDs etc safely through the post.
- We also offer Less-flute, our range of innovative, economical board grades which use eco-friendly paper in a new improved flute profile. Less-flute is light but strong – making it ideal for posted packages.
